# 1 Introduction

## 1.1 Purpose

This document describes the requirements for a Banking Management System. The system provides secure banking operations, client management, transaction processing, currency conversion, and user access control.

## 1.2 Scope

The Banking Management System will:

- Manage client information and bank accounts
- Process financial transactions (deposits, withdrawals, transfers)
- Provide currency exchange capabilities
- Control user access with authentication and permission systems
- Maintain comprehensive audit trails and logging

## 1.3 Definitions, Acronyms, and Abbreviations

- **SRS**: Software Requirements Specification
- **FR**: Functional Requirement
- **NFR**: Non-Functional Requirement
- **UI**: User Interface
- **M**: Must Have (Critical requirement)
- **S**: Should Have (Important but not critical)
- **C**: Could Have (Optional)

## 1.4 References

- IEEE Std 830-1998 - IEEE Recommended Practice for Software Requirements Specifications
- Course Materials: "Software Requirements Engineering"
- Banking Security Standards

# 2 Overall Description

## 2.1 Product Perspective

The Banking Management System is a console-based application with file-based data storage. It provides comprehensive banking operations with integrated currency exchange functionality.

## 2.2 Product Functions

- User Authentication and Access Control
- Client Account Management
- Financial Transaction Processing
- Currency Exchange Operations
- Comprehensive Logging and Audit Trails
- Security and Input Validation

## 2.3 User Characteristics

- **Bank Clients:** Users who perform deposits, withdrawals, and currency exchanges
- **Administrators:** Users with full system access for client and system management

## 2.4 Constraints

- Console-based interface
- File-based data storage (text files)
- Local operation only (no network connectivity)
- Must run on Windows with C++ compiler

# 3 Specific Requirements

## 3.1 Functional Requirements

### 3.1.1 Authentication and Access

#### FR-AUTH-001: User Login

**Priority: M**

- System shall allow users to log into their bank accounts
- System shall validate username and password credentials
- System shall provide appropriate access based on user role

#### FR-AUTH-002: Admin Access Control

**Priority: M**

- Admin users shall have full system access privileges
- Regular users shall have limited transaction capabilities

### 3.1.2 Client Management

#### FR-CLIENT-001: View Client List Priority: M

- Admin shall be able to view the complete client list
- System shall display all client records in organized format

#### FR-CLIENT-002: Search Clients Priority: M

- Admin shall be able to search for specific clients
- Search functionality shall support multiple criteria

#### FR-CLIENT-003: Delete Client Records Priority: M

- Admin shall be able to delete client records
- System shall require confirmation before deletion

#### FR-CLIENT-004: Add New Clients Priority: M

- Admin shall be able to add new clients with detailed profiles
- Required client information: account details, personal information, initial balance

### 3.1.3 Transaction Processing

#### FR-TRANS-001: Deposit Funds Priority: M

- Signed-in users shall be able to deposit funds into accounts
- System shall update account balance accordingly

#### FR-TRANS-002: Withdraw Funds Priority: M

- Signed-in users shall be able to withdraw funds from accounts
- System shall validate sufficient funds before withdrawal

#### FR-TRANS-003: Transfer Money Priority: M

- Admin shall be able to transfer money between accounts
- System shall validate both source and destination accounts

### 3.1.4 Currency Exchange

#### FR-CURR-001: View Available Currencies Priority: S

- Users shall be able to see available currencies
- System shall display current supported currency codes

#### FR-CURR-002: Find Currency Rates Priority: S

- Users shall be able to find specific currency rates

- System shall display current exchange rates

**FR-CURR-003: Calculate Currency Conversion** **Priority: S**

- Users shall be able to calculate currency conversion
- System shall provide real-time conversion calculations

**FR-CURR-004: Commit Currency Exchange** **Priority: S**

- Signed-in users shall be able to commit currency exchange
- System shall update account balances after exchange transactions

## 3.2 Non-Functional Requirements

### 3.2.1 Security Requirements

**NFR-SEC-001: Password Protected Access** **Priority: M**

- System shall provide password protected access to all functionalities
- All sensitive operations shall require authentication

**NFR-SEC-002: User Authentication System** **Priority: M**

- System shall provide a user authentication and login system
- Credentials shall be securely stored and validated

**NFR-SEC-003: Login Attempt Tracking** **Priority: S**

- System shall keep track of failed login attempts
- System may implement account lockout after excessive failures

**NFR-SEC-004: User Permission Management** **Priority: M**

- System shall manage user permissions for different operations
- Role-based access control shall be implemented

### 3.2.2 Data Management Requirements

**NFR-DATA-001: Transaction Tracking** **Priority: M**

- System shall keep track of each transaction and the time it was done
- Complete audit trail for all financial operations

**NFR-DATA-002: Input Validation** **Priority: M**

- System shall provide user input validation and tracking
- Protection against data migration and incorrect data types
- Validation for all user inputs and financial amounts

**NFR-DATA-003: User Activity Logging** **Priority: S**

- System shall keep user activity logging
- All significant user actions shall be recorded

### **3.2.3 Currency Exchange Requirements**

#### **NFR-CURR-001: Periodic Rate Updates**

**Priority: S**

- System shall update exchange rates periodically
- Automatic refresh of currency exchange rates

#### **NFR-CURR-002: Multi-Currency Support**

**Priority: S**

- System shall provide support for multiple currencies
- Handling of different currency codes and conversions

### **3.2.4 Reliability Requirements**

#### **NFR-REL-001: Data Integrity**

**Priority: M**

- System shall maintain data consistency across all operations
- No data loss during transaction processing

#### **NFR-REL-002: Error Handling**

**Priority: S**

- System shall handle errors gracefully with appropriate messages
- No system crashes on invalid inputs or operations

## **4 System Features**

### **4.1 Authentication and Security**

- Secure user login with credential validation
- Role-based access control (Admin vs Regular User)
- Login attempt monitoring and tracking
- Session management for signed-in users

### **4.2 Client Management**

- Comprehensive client profile management
- Client search and retrieval functionality
- Client record creation, viewing, and deletion

### **4.3 Financial Transactions**

- Deposit and withdrawal processing
- Inter-account fund transfers
- Balance validation and update
- Transaction history recording

## 4.4 Currency Exchange

- Multi-currency account support
- Real-time exchange rate display
- Currency conversion calculations
- Exchange transaction execution

## 4.5 Audit and Logging

- Comprehensive transaction logging
- User activity monitoring
- System operation tracking
- Security event recording

# 5 Appendices

## 5.1 Data Storage Format

- **User Data:** username#——#password#——#permissions
- **Client Data:** AccountNumber#——#PinCode#——#Name#——#Phone#——#AccountBal
- **Transaction Logs:** Timestamp, User, Action, Details

## 5.2 User Roles and Permissions

- **Admin:** Full access to all system functions
- **Regular User:** Limited to personal transactions and currency exchange

## 5.3 Supported Currencies

- MAD (Moroccan Dirham) - Base currency
- USD (US Dollar)
- EUR (Euro)
- GBP (British Pound)
- CAD (Canadian Dollar)
